

Convision Central Manager

Convision Central Manager CCM

The central solution for decentralized requirements

CCM Convision Central Manager is a compact software solution which manages all Convision IP video servers and indicates all connected CCTV and network cameras. You can find any recently added IP video server within a short time by the comfortable search function. The integration in the system is very easy. The images of CCTV or network cameras can easily be assigned and saved to a multiplex view by drag & drop function.

There are no restrictions concerning the multiplicity of the profiles and combinations. As it is usual from the uplink in an alarm centre, in addition to the alarms, all disturbance and service messages can be linked up, too. Live images of the event are depicted by the CCM immediately. Over the integrated recorder all recorded images can be comfortably evaluate via Motion-Event-Histogram and interesting sequences can be saved as MPEG-2 files.

- Comfortable display, configuration and management of Convision IP video servers and IP cameras under one surface
- Extensive overview of not defined number of video sources from LAN and WAN
- Free definable, unlimited display possibilities: from one camera up to 100 camera pictures in multiviewing mode
- Freely scalable view of the monitoring display, automatic adjustment of video image sizes to the frameworks
- Fast finding of events via Motion-Event-Histogram with date/time Display
- Evaluation and Export of recorded sequences as MPEG-2 movie
- Receipt of alarm-, disturbance- and service-messages over HTTP and UDP with Motion Detection, I/O contacts, Timer or HD status
- Immediately live images of the event
- Automatic switching to predefined alarm view
- Monitoring of the connecting status
- Wake-up-on-alarm mode – no CPU/network load

Network Video Solutions**

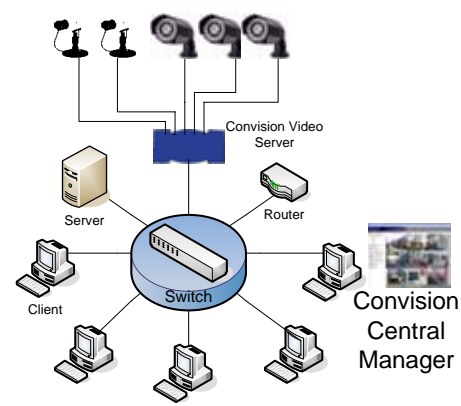

Forward Looking. Useful.
Simply Easier.

Technical Data Convision Central Manager CCM

Stand: 2010-08-11

Features	
Numbers of Video sources	Unlimited
Configuration of the IP video server	Automatically in the LAN, manually with Internet connection
Pre defined views	Unlimited
Alarm protocols	HTTP, UDP
Alerting	Automatic switching to pre- defined alarm view Alerting via Motion Detection, Timer or HDD conditions
Evaluation of recorded images	Comfortable display via Motion-Event-Histogram Export of the video sequences as MPEG-2 movie Event based playback
Virtual guarding with camera tours	Yes
Resizable viewing window	Yes
Fullsize view	Yes
Control of connection	1x per Minute
User profiles	20
Multiple license installation	Yes, but only one Station can be active
License model	pro Convision video server, (Basislizenz kostenfrei); pro Network Camera
System-requirements	
Operating System	Windows XP, Vista32Bit, Windows 7
CPU	3 GHz Celeron, Core 2 Duo recommended
Memory	1GB
Network	100Mbit/s
Supported Hardware	Convision IP video server, Convision Network Cameras, Convision Hybrid server, AXIS- and Robotix-Cameras over Convision Hybrid server (Videostream: MJPEG)
